SUMMARY

AI systems architect, product builder, and generative AI specialist with 4+ years of hands-on Generative AI experience and 15+ years of professional technology-driven creative production experience. Designs and prototypes AI-powered products, autonomous agent systems, business automation workflows, and intelligent operating systems that transform complex business problems into executable technology solutions.

Founder-level experience taking AI concepts from problem identification → system architecture → agent design → workflow orchestration → user experience → implementation → optimization.

Built and developed AI product concepts and working systems spanning business automation, workforce management, multi-agent collaboration, generative AI, creative technology, AI operations, and intelligent decision support.

Combines technical AI development with product strategy, creative technology, systems thinking, and executive-level problem solving.

EDUCATION

Google AI / Coursera

AI Fundamentals, AI for Brainstorming and Planning, AI for Research and Insights, AI for Writing and Communicating, AI for Content Creation, AI for Data Analysis, AI for App Building

EXPERIENCE

Founder / Executive Audio Director / Generative AI Specialist

2022–Present

WORKX AUDIO — AI R&D & CREATIVE TECHNOLOGY

Lead AI and creative-technology development across music production, generative AI, artist development, sound design, and AI-assisted creative systems.

- Integrated Generative AI into professional music-production workflows.
- Developed AI-generated music concepts, artist personas, creative systems, and production workflows.
- Built AI-assisted creative pipelines for music, branding, visual development, and content creation.
- Developed AI artist identities and structured creative personas.
- Designed AI-powered music and artist-development concepts.
- Applied traditional audio-engineering expertise to emerging Generative AI technologies.
- Conducted ongoing experimentation and R&D across AI music-generation systems.
- Developed scalable concepts for AI-powered creative products and services.
- Connected AI capabilities to real-world commercial workflows rather than treating Generative AI solely as an experimental technology.
- Experience: 15+ years professional audio engineering; 4+ years Generative AI & Creative AI

Founder / Executive Audio Director / Generative AI Specialist

2022–Present

WORKX AUDIO

Lead the development of AI-enhanced music, audio, creative technology, and emerging AI product concepts.

- AI research and development
- Generative AI experimentation
- AI product strategy
- Creative technology development
- Music production
- Audio engineering
- AI-assisted content development
- Artist development

- Digital product development
- Business strategy

Audio Engineer / Producer / Creative Technology Specialist

15+ Years

PROFESSIONAL AUDIO ENGINEERING

Extensive professional experience across music production, recording, mixing, mastering, sound design, creative direction, artist development, music technology, and commercial audio workflows.

- Music production
- Recording
- Mixing
- Mastering
- Sound design
- Creative direction
- Artist development
- Music technology
- Commercial audio workflows
- Released 20 TV/movie/game syncable albums and developed extensive experience translating creative requirements into finished technical products.

PROJECTS

AXIOM OS | Autonomous AI Operating System for Business Operations. Designed Axiom OS as an AI operating-system layer for autonomous business execution and the intelligence foundation behind the Orvyn ecosystem.

- AI agent orchestration
- Autonomous business workflows
- Agent-to-agent collaboration
- Task delegation
- Business-process automation
- Intelligent decision support
- Operational monitoring
- Modular AI architecture
- Human oversight and escalation
- Leadership demonstrated: AI architecture · systems thinking · agent design · product strategy · automation · autonomous workflow design

ORVYN WORKFORCE AI | AI-Powered Workforce Coverage & Scheduling Platform. Designed an AI workforce-management system focused on solving real operational problems in healthcare staffing and workforce coverage.

- Multi-location scheduling
- 24-hour shift coverage
- 12-hour shift management
- Real-time pickup opportunities
- Workforce availability
- Shift claiming
- Coverage monitoring
- Automated scheduling workflows
- Role-based system access
- Database-backed scheduling infrastructure
- Developed the product roadmap from initial scheduling concept through increasingly sophisticated versions incorporating authentication, database infrastructure, real-time coverage data, and atomic shift claiming.
- Leadership demonstrated: AI product development · workflow automation · requirements analysis · systems architecture · operational AI · SaaS product strategy

WORKX AI | AI Solutions Agency & Business Automation Framework.

- Created a business framework centered on: Problem → Diagnosis → AI Solution → Implementation → Optimization → Recurring Revenue

- Developed an AI solution catalog covering AI Lead Follow-Up Agents, AI Voice Receptionists, AI Content Engines, AI Workforce Coverage Agents, AI Knowledge Assistants, AI Sales Intelligence, AI Recruiting Systems, AI Finance/Admin Automation, Industry-specific AI systems, and AI Operating Systems.
- Created a product ladder ranging from AI discovery and audits through complete AI systems, autonomous agents, AI operating systems, and ongoing AI management.
- Demonstrates the ability to approach AI from the business problem first, rather than simply selecting an AI tool and attempting to force it into a workflow.
- Leadership demonstrated: AI consulting · solution architecture · business-process analysis · productization · AI implementation strategy · client-facing AI leadership

CORTEX LEDGER AI | AI Intelligence, Data & Trust Concept.

- Developed the Cortex Ledger AI brand and product concept around intelligent data processing, AI-assisted business intelligence, accuracy, transparency, and trustworthy AI operations.
- AI brand architecture
- AI assistant persona system
- Tessa AI character/assistant
- AI visual identity
- Human-machine interaction concepts
- AI trust and transparency positioning
- Product experience concepts
- Demonstrates the ability to combine AI technology, product identity, user experience, and human-centered AI communication.

AI AGENT RECORD LABEL PLATFORM | Multi-Agent Creative Business Simulation. Designed an AI-powered record-label environment where specialized AI agents operate as a coordinated executive team.

- Artist development
- Marketing
- Public relations
- Social media
- Finance
- Image development
- Creative direction
- A&R
- Strategy
- Executive decision-making
- Designed a simulation-style interface in which AI agents have identities, personalities, roles, bios, and specialized responsibilities and can participate in virtual executive meetings.
- The concept combines: Multi-agent AI + simulation UX + creative AI + business operations + autonomous decision workflows.
- Leadership demonstrated: Multi-agent architecture · AI persona design · agent specialization · product UX · creative AI systems · AI organizational design

AI Lead Follow-Up System | Designed automated AI workflows capable of identifying leads, initiating follow-up, qualifying prospects, and escalating conversations when human intervention is required.

AI Voice Receptionist | Designed an AI receptionist concept capable of handling inbound communication, answering common questions, routing requests, and integrating conversational AI into business operations.

AI Content Engine | Designed AI-powered content workflows capable of turning business information into structured marketing content and distributing content production across multiple channels.

AI Knowledge Systems | Designed concepts for internal AI assistants capable of transforming organizational information into searchable, conversational knowledge systems.

AI Workforce Coverage Agent | Designed an AI agent architecture for monitoring workforce coverage, identifying staffing gaps, surfacing available workers, and supporting real-time shift coverage.

TECHNICAL SKILLS

AI transformation strategy

AI opportunity identification
AI product strategy
AI systems planning
AI implementation roadmaps
AI governance concepts
Human-in-the-loop system design
AI workflow optimization
Technical product leadership
Multi-agent AI systems
Autonomous AI workflows
Agent orchestration
AI operating systems
AI business automation
Intelligent workflow architecture
AI decision-support systems
Knowledge-driven AI systems
API-driven AI applications
Modular AI architectures
AI SaaS product design
AI agent products
Business automation platforms
Internal AI tools
AI workforce systems
AI customer-service systems
AI sales/lead systems
AI marketing systems
AI knowledge systems
AI creative platforms
Generative AI
LLM-powered applications
AI content generation
Generative music
AI-assisted creative development
AI personas and agents
Prompt engineering
AI-assisted research
AI-assisted software development
Claude Code
AI-assisted coding workflows
GitHub-based development
Application architecture
Database-backed application concepts
Authentication architecture
API integrations
SaaS architecture
UI/UX systems
Automation architecture
LLM applications

AI agents
Multi-agent systems
AI workflow design
AI automation
GitHub
API-driven systems
Database architecture
Authentication systems
Real-time application concepts
AI artist development
AI audio R&D
AI image generation
AI creative direction
AI content systems
FL Studio
Omnisphere
Analog Lab
FabFilter
Melodyne
Professional mixing/mastering
Sound design
Music production

AI DEVELOPMENT APPROACH

My approach to AI development is built around five stages: 1. IDENTIFY THE PROBLEM — Determine where money, time, productivity, customer experience, or operational capacity is being lost. 2. DESIGN THE INTELLIGENCE LAYER — Determine what the AI needs to know, decide, monitor, generate, or execute. 3. BUILD THE AGENT/WORKFLOW SYSTEM — Create specialized agents, workflows, tools, APIs, databases, interfaces, and escalation logic. 4. CONNECT AI TO THE BUSINESS — Move AI from a standalone chatbot into the actual operating workflow. 5. MEASURE & OPTIMIZE — Monitor outcomes, improve workflows, identify bottlenecks, and continuously expand automation.

LEAD AI VALUE PROPOSITION

I DON'T JUST USE AI. I DESIGN SYSTEMS AROUND IT.

My strongest differentiator is the ability to combine AI technology, business operations, product development, and creative problem solving.

I approach AI as an operating capability rather than a chatbot.

I can: Analyze a business problem → identify the AI opportunity → architect the system → design the agents → build the workflow → develop the product experience → test the system → optimize the operation.

That combination of AI strategy + systems thinking + product development + hands-on implementation + creative technology positions me to contribute at the level of a Lead AI Engineer, AI Systems Architect, AI Product Lead, AI Solutions Architect, or AI Innovation Lead.

TARGET ROLES

Lead AI Engineer AI Systems Architect AI Solutions Architect AI Product Lead AI Innovation Lead AI Automation Architect Generative AI Lead AI Agent Systems Lead AI R&D Lead AI Strategy & Implementation Lead
